

Since the inception of Fusion Catamarans in 2004 there has been in excess of fifty kits sold world wide. With more than ten agents and representatives around the world, building on the Fusion concept the business has come alongway . This year saw Fusion Catamarans introducing the new Fusion Power Catamaran at the Sanctuary Cove International Boat Show. It has once again proven to be a popular design with a huge bridge deck clearance, massive internal volume and new underwater hull sections designed by the well respected New Zealand based designer Craig Loomes. With fuel costs increasing weekly, the efficiency, low wash, stability and large volume of this design is proving very popular around the globe.

There are many different choices when it comes to powering the Fusion “Power” but most are opting to have the new Yanmar 4BY 180’s installed. With fuel consumption down to 1.6 lts per mile at a healthy 16-18 knots cruise speed it’s no wonder. The “Power” tops out with a maximum top speed of 22 kts with this configuration and with the 260 hp Yanmars the top speed is set to be around the 30-32 kt mark, making this one of the fastest Liveboard Power Catamarans available today.

For more information on this design and the Fusion 40 Sailing Catamaran please contact your nearest Fusion Agent.
