Model / code of the new product: CTEK D250S Dual

Description of new product :

Complete battery management without mains power  
It's not always convenient to connect to mains power when you're off adventuring on the road or on the water. But the last thing you want to worry about is running out of battery power. So how can you keep your batteries not only charged, but also in optimum condition, without mains power?

Bainbridge Technologies introduces the new CTEK D250S Dual DC-DC Smart Charger, designed to charge, maintain and condition your leisure batteries using your alternator power, solar power, or both. So you can save your time for adventuring instead of being tied to mains power; and you can save money on battery replacements by keeping your batteries in great condition. The new CTEK D250S Dual is simple and affordable

Any leisure vehicle with a dual battery system will benefit from the convenience and cost-savings of the CTEK D250S Dual. With 2 DC inputs - one for alternator power and one for solar power - you can charge your batteries while you're on the move or when you're ready to stay put for awhile.

The simplicity of the CTEK D250S Dual is what makes it affordable, too: it doesn't need heavy gauge wiring; it can be easily DIY installed; it doesn't require a solar regulator; and it doesn't need a VSR.

Keep your adventures going with the CTEK D250S Dual  
The CTEK D250S gives you the freedom and flexibility to keep your batteries charged and in optimum condition without having to connect to mains power. Will it work for your battery set-up? Watch our Youtube on what the CTEK D250S Dual does and why at [www.baintech.com.au/d250sde](http://www.baintech.com.au/d250sde) . You can also ask questions directly to our "resident power systems expert", Peter Blume, at [www.baintech.com.au/blume](http://www.baintech.com.au/blume).

Tell Bainbridge about your best or worst "dead battery" story in 50 words or less, and you could win a FREE CTEK D250S Dual.
