Model / code of the new product: ProTeA Puritas Marine Minie

Description of new product :
Italian made Ozone Generator

Unique Features / other information :

Ozone generators have been around since the 1920's and are completely safe and reliable. Ozone or O₃ is the most efficient sterilisation agent known to man after Ammonia. As opposed to oxygen or O₂ which supports life forms, ozone kills bacteria! The Puritas marine works by pumping a constant flow of Ozone into fresh or grey water tanks to kill bacteria and odours in the tank but also (unlike UV sterilizers)it kills mould growing in the tank and any mould or bacteria in all the pipes from the tank. Most remarkably, once Ozone has killed bacteria it simply reverts to Oxygen without any residue or aftertaste. There are several models available - The Puritas marine Mini which is suitable for smaller tanks and for larger installations and tanks, the Puritas Marine is more suitable. Unlike UV sterilizers these units are designed to be virtually maintenance free and the efficiency of Ozone means you can be certain of the quality of your tank water.
