

****PRESS RELEASE****

‘SERIAL HYBRID RELEASE’

Sydney International Boat Show 2011 will see the Australian release by STEYR Motors of its new Serial Hybrid Propulsion System.

The STEYR Motors ‘Serial Hybrid’ acts as an efficient and compact Genset combining a unique STEYR Motors diesel engine with a highly efficient Permanent Magnet generator.

The core of the Genset is a newly developed horizontal, 2 cylinder, parallel, twin marine diesel engine with 25 kW and equipped with a STEYR Motors patented mass balancing system.

Developed in conjunction with Mastervolt, the STEYR Motors ‘Serial Hybrid’ is best described as a compact, intelligent power station with generator, inverter, three-step battery charger and shore power hub all rolled into one.

Smaller and lighter than conventional generators, the ‘Serial Hybrid’ provides everything needed to run high-demand systems on a boat, and does so with automatic precision.

The Serial Hybrid will be on display at the STEYR Motors Australia stand at the Sydney International Boat Show July 28- August 1, Stand 206b
